Certified Professionals may earn .2 CEUs by completing quizzes based on selected articles in each issue of the *Assistive Technology* journal.

Each quiz is 12 questions in multiple-choice or true-false format. You must answer nine questions correctly (75%) to earn the .2 CEU credit. Results of the quiz will be emailed (or mailed by request) upon completion.

Complete the quiz by circling the correct answers. Mail or fax the completed quiz with payment to RESNA Quizzes, 1700 N. Moore St, Suite 1540, Arlington, VA 22209. FAX: (703) 524-6630.

- RESNA members: $32
- Nonmembers: $45

*Other quizzes from Assistive Technology Journal articles may be found on the RESNA website (www.RESNA.org). The primary program learning objective is to keep abreast of current findings and practices in assistive technology, research and rehabilitation engineering.*

Was the content of the article relevant to current AT practice?  □ Yes  □ No

Was reading the article and completing the quiz a good way for you to learn?  □ Yes  □ No
1. PIADS, which stands for ___________________, is another validated tool that measures the impact of a device on the user.
   A. Psychological Impact of Assistive Devices Scale
   B. Psychosocial Influence of Assistive Derivative Scale
   C. Psychosocial Impact of Assistive Devices Scale
   D. Psychological Influence of Assistive Disability Scale

2. T/F A growing concern for both those with and those without disabilities mentioned in the literature is the potential health impact of computer overuse.

3. Which of the following was NOT given as a prerequisite for participation in the study:
   A. experience using a computer-related ATD device for at least six (6) months
   B. be at least 18 years of age
   C. be mentally incapacitated somehow
   D. have some type of physical disability (sensory or mobility impairment)

4. T/F The PIADS measures satisfaction with the use of the ATD (such as comfort, weight, durability, simplicity), and the overall goal of the QUEST is to describe the impact of an ATD on a person’s functional independence, well-being, and quality of life.

5. Which of the following is NOT considered to be a health-related risk factor while using the computer:
   A. chronic strain syndrome
   B. eyestrain
   C. repetitive strain injury
   D. carpal tunnel syndrome

6. T/F Two steps that one can take to prevent injury while using the computer are to change one’s posture and stretch one’s muscles.
7. The following observations were made during this study:
   A. the need for resources to procure ATDs
   B. the need for increased awareness
   C. the need for training
   D. all of the above
   E. none of the above

8. T/F The results of this study suggest that CILs could and should not play an important role in educating people with disabilities regarding the availability and use of ATDs because of their prohibitive cost.

9. T/F The authors of this study anticipated a much larger number of participants. Therefore, more participants with a greater variety of disabilities and wider range of computer ATDs would be optimal to better understand this area of assistive technology.

10. One or several drawbacks of the PIADS was/were its:
    A. length
    B. complexity
    C. lack of relevance
    D. A and B only
    E. A and C only
    F. B and C only

11. The ________________ was found to be more useful than the ________________, and most ________________ questions were answered by all respondents.
    A. QUEST…PIADS…QUEST
    B. PIADS…QUEST…PIADS

12. T/F The instruments currently used to measure issues and concerns about computer-related technologies among the disabled community are satisfactory and have proven to be useful and very effective.
