Paper Title: TOUCH MUG

Abstract: The Touch Mug is simple mug design for people who are visually impaired. Different wall thicknesses create different heat conduction. This mug will provide assistance to those who are blind so that they can pour water effectively and feel the level of the water in the mug by touching the thin heat zone. The Touch Mug makes tea time safer for people with visual impairments. The Touch Mug is beautiful and can be used by everyone, although people with visual impairments will find the thin heat zone especially useful.
